## Properties of Scalar and Vector

---

### • Some Properties of Vector:

1) **Equality of two vectors:** Two vectors  $\vec{A}$  and  $\vec{B}$  are said to be equal if they have the same magnitude and point in the same direction i.e.  $\vec{A} = \vec{B}$

2) **Negative of a Vector:** The negative of vector  $\vec{A}$  is defined as giving the vector sum of zero value when added to  $\vec{A}$ . That is,  $\vec{A} + (-\vec{A}) = 0$ . The vector  $\vec{A}$  and  $-\vec{A}$  have the same magnitude but are in opposite directions.
